## Fast Measurement & Special Application

The U6200A supports real-time digital signal processing technology, which is applied to analyze data as simultaneously getting new readings and speeding measurement. The "Limit Modes" is worth to be mentioned, i.e. users can set margin according to their specific measurements. Via Go-On or Stop and USB Output settings (Figure-6), the U6200A will keep or stop measuring as a limit is exceeded, and generate an output signal to trigger external devices.

## Efficient After-Service

By the incredible calibration design and detailed user's manual, calibration service (Figure-7) is not the exclusive business for specific labs or calibration centers any more. And with 1-year warranty, Picotest provides full service including calibration and repair. Users can leave messages on Picotest website <http://www.picotest.com.tw/contact.asp> (Figure-8) or via the address [sales@picotest.com.tw](mailto:sales@picotest.com.tw) for more technical assistance.

## Free Software & Familiar SCPI Commands

Via a USB or an optional GPIB interface, users can get data logs (Figure-9) by Microsoft Excel®. Furthermore, U6200A supports a webserver function, so users can easily control it via a LAN interface (Figure-10) by inputting Ethernet address (Default: 192.168.0.247) on web browsers. In addition, by the SCPI commands compatible to
